# Mountain Range in GIMP

## Objective:

To design a mountain range in GIMP

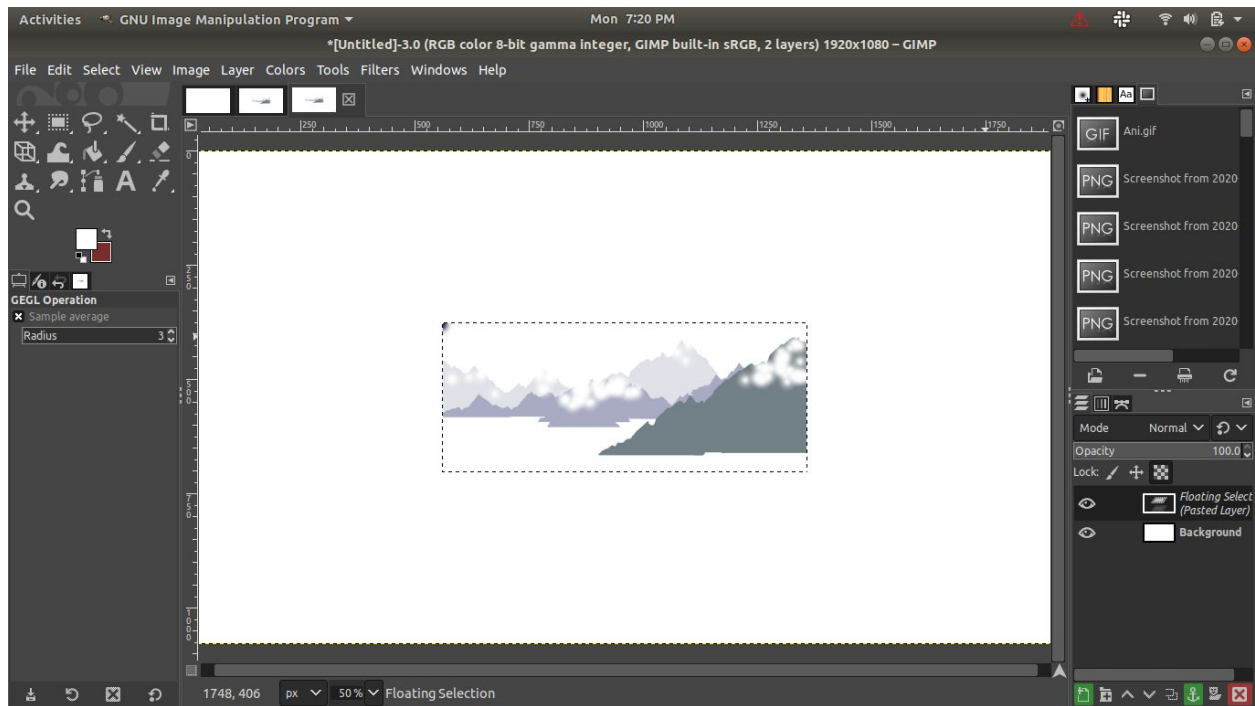

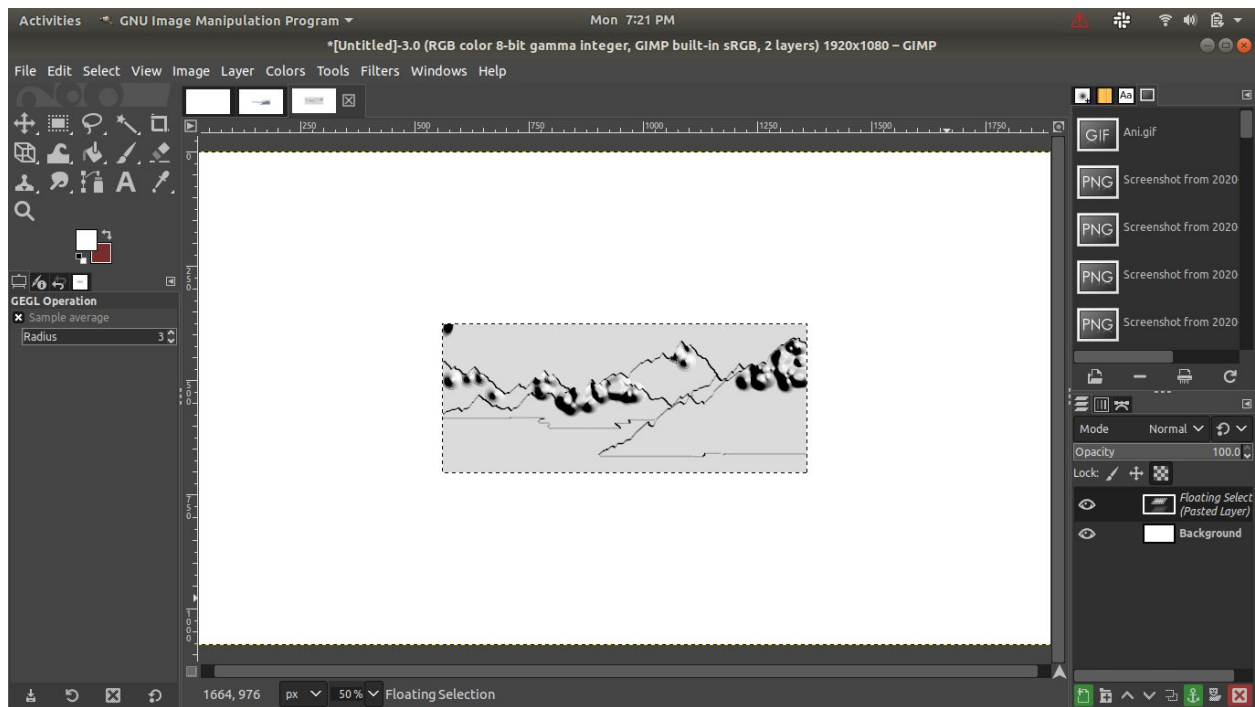

## Requirements:

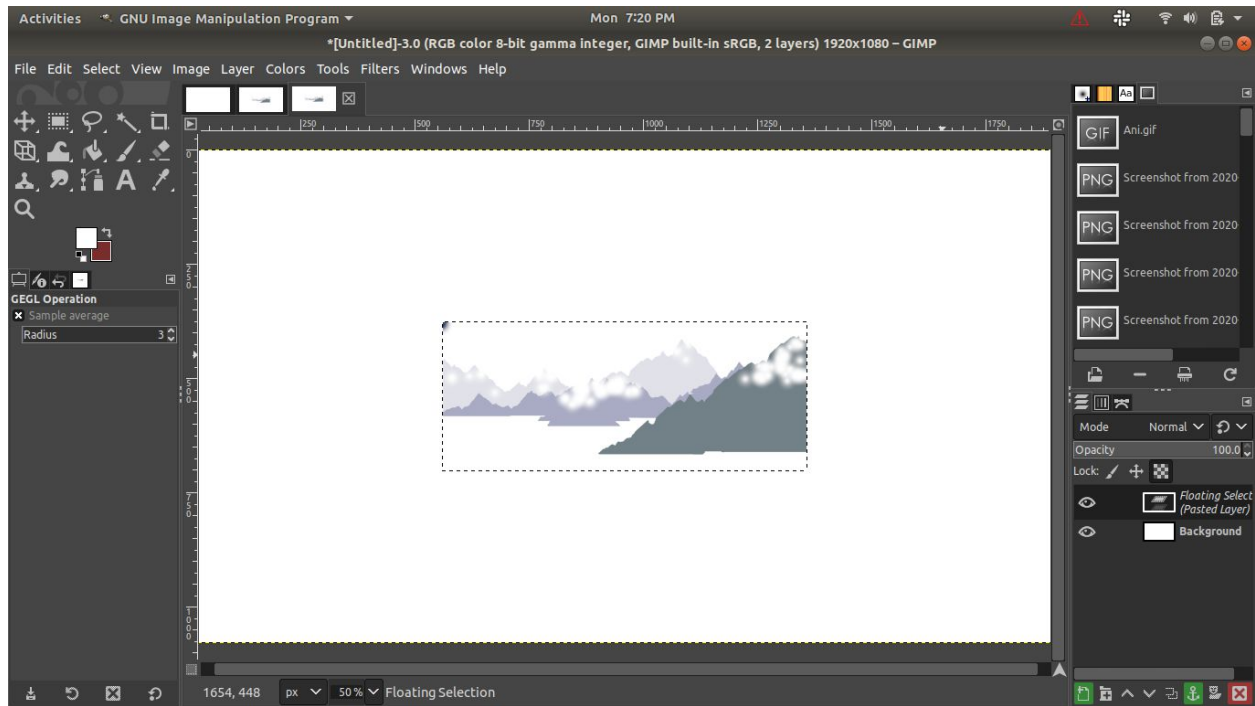

A Ubuntu 18.04 10 running system with 6 GB RAM was used to carry out the experiment.

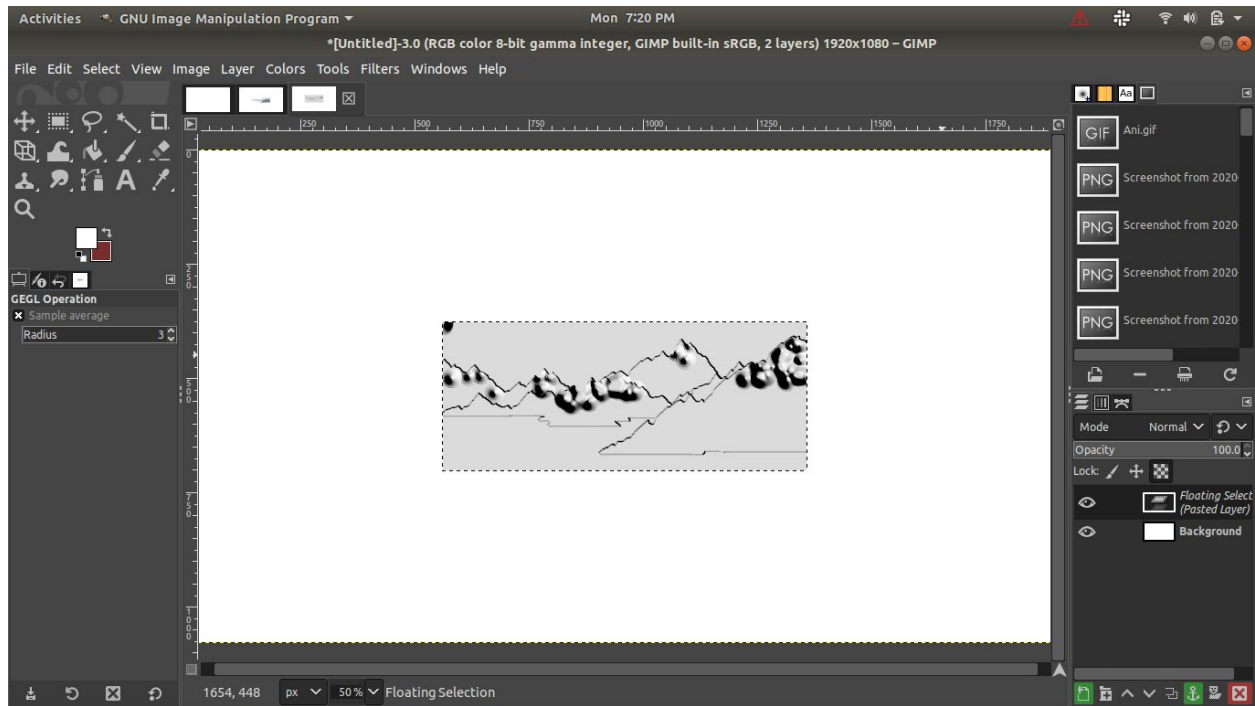

## Steps to create the animated design

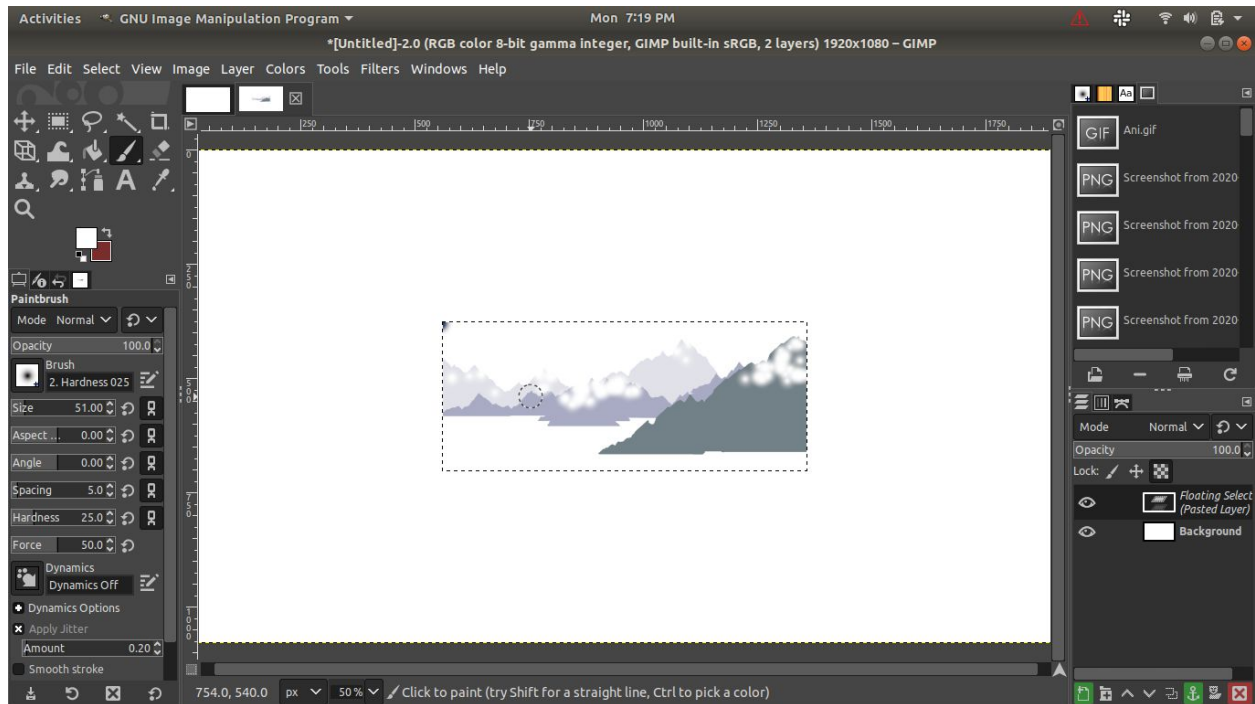

1. Start with a transparent layer.
2. Fill in the land portion with a color. ( b3b2b2 )
3. Lay in the base of the mountains with a soft brush ( bdc8b8 )
4. Add more layers for a higher altitude. Each one lighter in shade the higher you go.
5. With a thinner line, draw the crest of the mountain ( e4eae4 )
6. Use a Gaussian Blur filter on the area with a blur radius at 15.
7. Top off the crest with white with the narrowest brush . ( ffffff )
8. Use Gaussian Blur again but with a 15 blur radius.
9. Now use Filters- Distorts-Emboss... Play with settings until you like the result.
10. Add a new transparent layer.
11. Use a soft brush setting sized to match your mountains.
12. Start with an off white color and about a 50% Opacity brush setting.
13. Shade the lighter side of your mountains.
14. Use a smaller brush and full white color to add snow to the tops of your highest mountains.
15. With the same soft brush and 50 % Opacity add greens and tans to the lower levels where greenery would be... or a sandy beach.
